

Company: Lafarge Granulats Ouest
Location: Gahard sand quarry, France

Objective Since 1998, Lafarge has developed, in partnership with the local environment association *Bretagne Vivante*, a monitoring and preservation plan for the DROSERA rotundifolia carnivorous plant.

Context The sand quarry of Gahard is located in Bretagne. Pliocene sand is extracted for the concrete industry.
The Drosera rotundifolia carnivorous was identified during a census on former extraction areas.

Solution Implementation of regular monitoring visits
Redaction of annual reports
Maintenance work
Rehabilitation works in order to encourage the development of the Drosera plant.

Result Planning activities enabled the protection of the first identified areas of development, as well as the development of new areas.
The land will then be given to the local authorities and a natural reserve will be created, managed by the *Bretagne Vivante* association.

Partners Bretagne Vivante, local environment association
